

## Verdiem SURVEYOR - PC Energy Management

SURVEYOR allows you to measure, manage, and reduce your network's energy consumption, saving money and reducing your organisations carbon footprint. Easy to implement network-wide best practices flexible enough to tailor to individual requirements balancing user productivity and energy efficiency.

### Demonstrable energy and cost savings

SURVEYOR reduces on average 200 kilowatt-hours (kWh) of annual energy use from every PC, equivalent to saving £24 to £34\* in operating costs for every computer in your organisation. That means that for every 5,000 PCs in the network, you can cut your annual energy consumption by an average of one million kWh.

The Reporting engine within SURVEYOR, provides detailed analysis of CO2, energy and to the penny financial savings.

Verdiem Surveyor addresses five core areas of functionality required when implementing power management solutions in the workplace:

- Network-level control of PC energy policies
- Flexible and dynamic policy implementation
- Improved PC software and OS maintenance and upgrade success rates
- Wake or shut down PCs on-demand
- Comprehensive reporting
